These test results are representative of the individual sample selected and submitted by the client.

Limit(s) of Qualitieation(LDQ)vels, concentrations, or quantities of a target variable (e.g., target analyte) that can be reported with a specified degree of confidence.

- b = ISO/IEC 17025:2017 accredited method.
- * = TNIaccredited analyte.

Explanation of QC Flag Comments:

Code	planation
	rences affecting spike or surrogate recoveries.
	ity control result biased high. Only non-detect samples
	I outside QC limits. Data considered estimate.
	concentration greater than four times the amount
	mogenous sample matrix, affecting RPD result and/or %
	sults above calibration curve.
	I outside QC limits. Data acceptable based on remaining
	rcent difference (RPD) outside control limit.
	culable, as sample or duplicate results are less than five times the
	licates RPD non-calculable, as only one replicate is within the analytical
	itation level raised due to low sample volume and/or
	level raised due to matrix interference.
	te detected in method blank, but not in associated
	he sample concentration is greater than 5 times the blank
	The sample concentration is less than 5 times the blank concentration.
